SUMMARY

Computer Science student at BINUS University (Intelligent Systems stream) with hands-on experience in backend, full-stack development, and data automation. Interested in software engineering and AI, with a focus on building practical and reliable solutions. Proactive, detail-oriented, and eager to learn and contribute in collaborative engineering environments

EDUCATION

Bina Nusantara University – Alam Sutera, Tangerang, Banten *September 2023 - Present*
Computer Science, Streaming: Intelligent Systems
GPA: 3.85 / 4.00
Relevant Coursework: Machine Learning, Deep Learning, NLP, Database Technology, Algorithm and Programming, Software Engineering

EXPERIENCE

Data Analyst Intern – Bank of China (Hong Kong) Limited Jakarta Branch *February 2026 - Present*

- Developed Python automation (openpyxl) to replace manual report generation, reducing weekly reporting time and eliminating recurring formatting errors
- Built a second automation script for automated report-ready notifications, streamlining team workflow
- Designed a Power BI dashboard to visualize customer and product performance data
- Performed data reconciliation and root cause analysis to identify discrepancies across internal and head-office datasets

ORGANIZATIONAL EXPERIENCE

Keluarga Mahasiswa Buddhis Dhammavaddhana – Alam Sutera, Tangerang, Banten *January 2024 - December 2025*

- Coordinated logistics for PMB x WP 2025, ensuring smooth preparation and implementation of student orientation activities
- Led equipment and logistics team for Social Service Event II 2024, supporting successful community outreach
- Strengthened leadership, teamwork, and coordination skills through organizational and volunteer activities

PROJECTS

Flight Ticket Booking System – [Live](#) | [Frontend](#) | [Backend](#) **React** | **Vite** | **Go** | **PostgreSQL** | **Chi**

- Built a full-stack flight booking system with a React frontend and concurrency-safe Go REST API, preventing race conditions when multiple users attempt to book the same seat simultaneously
- Implemented in-memory locking with sync.Mutex and PostgreSQL row-level locking with SELECT ... FOR UPDATE, verified through concurrent goroutine tests
- Designed a swappable storage layer using Go interfaces, allowing migration from in-memory storage to PostgreSQL without modifying handlers
- Wrote automated unit and integration tests, including a concurrency test that spawns multiple goroutines to verify booking safety under load

FashionStore (E-Commerce) – [Demo](#) | [GitHub](#) **Next.js** | **Node.js** | **PostgreSQL**

- Built a full-stack e-commerce platform with product catalog, cart, checkout, and admin dashboard for managing products and orders
- Implemented JWT authentication and integrated Midtrans payment gateway
- Designed backend REST API with Express.js and Prisma ORM, deployed on Vercel (frontend), Railway (backend), and Neon (database)

CareerScope – [GitHub](#) **HTML** | **Tailwind CSS** | **Python** | **Flask**

- Developed the core backend of the career matching tool, using Python and Flask to manage the matching process
- Wrote the algorithm that processed student skills and interests to provide relevant career suggestions
- Ensured the backend worked smoothly with the front-end built in HTML and Tailwind CSS

SKILLS & LANGUAGES

- Programming:** Go, Python, Java, JavaScript, TypeScript, SQL, C
- Frameworks & Libraries:** Next.js, React, Express.js, Flask, Prisma, Pandas, Scikit-learn, Tailwind CSS
- Database & Tools:** PostgreSQL, Git, Postman, Supabase, Vercel, Railway, Neon, Firebase
- Soft Skills:** Leadership, Teamwork, Project Management, Public Speaking
- Languages:** Native Indonesian; Fluent English and Mandarin (HSK Level 5)
